Re: Karthik Bhaskaran

Dear Officer:

I offer this letter to detail the conditions of the direct, full-time, 40-hour per week employment of Karthik Bhaskaran in conjunction with Cognizant's H-1B petition filing.

Work Activities

Mr. Karthik Bhaskaran work activities will include:

	Job Duties	Percentage of Time
1	Analyze and gather the information for the existing system and come up with optimized technical solution for new business requirements. This includes study of existing system architecture, technology usages, application functionalities, hardware usages, possibility of incorporation of Cloud services (Microsoft Azure), use of DevOPS tools, GenAI Automation, use of Cognizant tools, process & methodologies to finalize system requirement for proposed solution. He will demonstrate a proposed solution to the Business Line and get the required sign-off. On Business sign-off, create design documents having low level technical changes, test strategy, different team involvement, data flow to internal or external applications, technology requirements etc. Once the document is finalized, upload the design document into the Jira application.	30
2	Providing end-to-end development activities which include creation of technical specification, build of software using Mainframe/ Azure/ DevOPS/GIT related technologies, creation of unit test plan, write of script to automate manual testing, test of software using automated or manual test script, promote of software package to Integration & User Acceptance test region, fix of any bug identified during testing, creation of package for implementation, raise of change request, implementation of tested software package in production region, validate implementation, perform live execution, support queries from technical/business team, fix any bug/defect identified post implementation etc. To make sure Functional and non-Functional testers understand business expectations and cover all scenarios to achieve business goals, address queries	35

	from client, use of appropriate tools in development, unit testing and implementation phases.	
3	Analysis of existing manual business processes to find automated solutions. This includes capture of existing manual business processes, brainstorming with Business, SME and Cognizant offshore/onshore resources to find out expected solutions that can be developed. Selection of Cognizant tool, processes & methodologies that can be used for solution. Creation of solution documents and demonstration of solutions to Business Line, SME and other stakeholders.	20
4	Actively participate in different Agile ceremonies like Sprint Planning and Sprint Retrospective, Sprint Refinement, Sprint review and Sprint Demo on Weekly/bi-weekly basis. Discuss the story points during Sprint Planning and on the items which did not go well and to be improved as part of Sprint retrospective. From Cognizant, represent scrum teams during Agile Ceremonies and share the key information to key stakeholders. Demonstration of new functional solution/system functionality to Business Line during System demo meeting.	10
5	Usage of the Cobol Code Coverage and Cobol Standard Checklist Tool developed by Cognizant to validate the quality of the software code meets the coding standard. Customize Cognizant Cobol Coverage and Cobol Standard Checklist tool to meet expected coding standard. This includes addition of new rules or deactivation of existing rules from the tool before quality check.	5
	TOTAL	100

As detailed above, Karthik Bhaskaran will use advanced methods related to the Cognizant position, and the Cognizant position requires a minimum of a bachelor's degree in a field of study that is directly related to position to successfully perform the job duties.

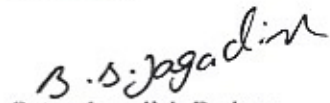

Selection of Employees and Control of Work

At all times, Cognizant remains the sole and direct employer of our talent and has control over the work of its employees. It is Cognizant that selects which of its employees will conduct work activities, determines what activities those employees will perform, and supervises and controls the work of those employees. Cognizant is responsible for paying salaries, benefits, and expenses for its employees. In the course of controlling the work activities of employees, Cognizant managers use a multitude of communication media and tools to supervise and control the work of our employees, including in-person or via video conferencing, desktop video, VoIP, mobile phones, instant messaging tools as well as through Cognizant's systems and tools.

Performance Reviews

The Performance Management Process at Cognizant is a structured, formal interaction between an employee and his or her manager. This process includes evaluating performance against set objectives and competencies applicable for that role, providing performance feedback, identifying development needs, and setting goals for the future. This on-going performance communication takes place between the employee and that employee's manager, which results in a performance rating for the employee. The objective of the Performance Management Process is to fuel the success of Cognizant and its employees. Please feel free to contact me for additional information. Thank you.

Sincerely,

Satya Jagadish Badam
Manager
